
$a = 0.0\,M$, $N = 10^4$
$a = 0.9\,M$, $N = 10^4$
fraction of N, of M_0
excised, number (Boris)
excised, number (midpoint)
excised, rest mass
left the mesh
plunging (exact invariants)
t/M
particles per bin
last snapshot
removal (exact continuation)
$\alpha = \alpha_{\rm exc}$
r_+
$\alpha_{\rm exc}$ line: equatorial plane
Kerr-Schild r/M
cumulative fraction
midpoint
Boris
$|\Delta E/E|$
$|\Delta L_z/L_z|$
$|\Delta Q/Q|$
error at the last snapshot before excision
